SIZE OF FARM A SUCCESS FACTOR

Results of Survey Conducted by Department of Agriculture in Ozark Pegion.

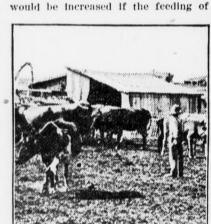

ADVANTAGE OF VALLEY LANDS

Dairy Industry Would Become More Profitable if Cows of Greater Productive Capacity Were Introduced by Farmers.

of Agriculture in five counties in the south and southeastern Ozark region of Missouri. The operation of a general farm in the Ozarks with much less than 40 acres of land for crops is exceedingly unsatisfactory, regardless of the location of the farm, whether among the valleys or the hills.

Study Many Kinds of Farms. The report of the survey published by the department as Department Bulletin 941, entitled "Farm Management in the Ozark Region of Missouri," is based on the study of the organization and management of 79 farms, 31 of which are representative of conditions of rolling and hilly uplands, and 48 of valley and level uplands. The topographical structure to a large extent determines the agricultural value of the land, says the report. As a rule the operator of a valley or level upland farm has a decided advantage over the operator of the rough farm. After deducting from their total receipts the year's operating expenses, including the value of family labor farms had, in 1917, an average labor for a part of the year.

What We Can Do

We know says that it's his

job to please his customers.

He is 100 per cent right. It's

our job to please merchants

by providing the kind of

printing that is wanted. Try

us and see what we can do.

You Say You Can't

That's what others have

· found some competitor

was doing what they

thought they couldn't do.

And getting away within

competitors by telling

your story in an attractive

manner so it will be read.

You'll get the results.
